

Description

ABAS Protect's manual sliding gate US is easily closed and opened. Manual sliding gate US offers the same good protection as traditional swing gates. Unlike swing gates, however, sliding gates run along the fence line, reducing risk of collision damage and economising on space.

The US gate is suspended in its back edge in a ball-bearing suspension roller. The roller resides in a C profile, well-protected from the elements. In the front edge, the gate is suspended on two sturdy ball-bearing wheels. The gate stand consists of a double post, which controls the gate leaf and provides excellent stability.

The US gate is filled with profiles up to 5.5 m, with remaining parts consisting of 50 x 50 mm chain link mesh. All substantial parts are either hot-dip galvanized (in compliance with EN ISO 1461) or stainless. Manual sliding gate US can handle clear openings up to 12 m in standard version.

Facts

Clear opening:	6–12 m
Height:	2 m + 3 rows of barbed wire
Top extension:	Barbed wire
Filling:	profiles 25x25x1.25 mm, mesh 50x50 mm
Treatment:	Hot-dip galvanized

Accessories

Clapper post
Gate lock FIX485
