

Pedestrian gates

Description

The standard version of ABAS Protect's pedestrian gate comes with profile filling and three rows of barbed wire as top extension.

To ensure a long lifespan, our gates are manufactured with all-welded steel pipes. Gates are also hot-dip galvanized according to EN ISO 1461 (55–70 µm), and optionally powder coated. This gives our pedestrian gates the ability to withstand tough conditions ranging from physical stress to climate related hardship.

Gate posts are made of all-welded steel pipes. Posts in standard version are made for encapsulation, but may optionally be supplied with base plate and anchors.

Gates are mounted on hinges, and are delivered complete with lock and pressures (lock cylinders not included).

Facts

Height:	2 m + 3 rows of barbed wire
Clear opening:	1 m
Gate frame:	60x60x1.5 mm
Filling:	Profiles 25x25x1.25 mm
Posts:	80x80x2 mm
Treatment:	Hot-dip galvanized
