

ProFence palisade fence

Description

ProFence palisade fence is available in a multitude of variations, all of which consist of welded, vertical steel profiles. Dimensions may vary according to security and design requirements.

ABAS Protect ProFence is suitable for applications that require both high security as well as refined aesthetics. Many corporations have grand entrances, but are oftentimes unaware of the fact that fence and gates are the company's outer border to the exterior world.

Strong construction ensures very high security, while damage risk is low. Security requirements determine the height of the sections and the choice of top extension. ProFence is preferably combined with video surveillance and/or alarm for a first class perimeter protection.

Construction and finish ensure a long lifespan with minimum maintenance. Sections and bars are galvanized after production, according to UNI-ISO 1461. The shape can be varied by different top extensions, and the posts can be equipped with knobs.

Sections and posts are very well suited for powder coating, in addition to hot-dip galvanizing. Standard colors are moss green (RAL 6005), olive green (RAL 6013) or black (RAL 9005).

Facts

Height:	Custom tailored
Mesh size:	100 mm C-C
Panel length:	3000 mm
Profile dim.:	25x25x1.25 mm
Treatment:	Hot-dip galvanized
