ProNet panel fence

Description

ProNet is an industrial fence with welded wire panels to assure prevention of unauthorized access. In combination with posts of high-strength steel, this provides for a powerful and airy perimeter protection.

By its very design and construction, ProNet ensures a long lifespan. Damage risk is low, while environmental effects are kept to a minimum, owing to the choice of material and surface treatment.

ProNet can be coated in most colors in the RAL scale. The ability to visually align the fence to buildings and surroundings provides a good basis for solutions that satisfy high standards of security and appearance.

ProNet is perimeter protection aimed at demands for long-term safety, appearance and overall economy.

Facts

Height:	630–2430 mm (200 mm interval)
Mesh size:	50x200 mm, 25x200 mm, 50x50 mm
Panel length:	2509 mm
